## The Transformation Is Amazing PVC Column Wraps

If you've already met the structural requirements of your project, Fypon® PVC column wraps can add an elegant finishing touch. Designed to install easily around an existing structural support, Fypon® column wraps allow you to add the sophistication of traditional columns near the end of your project, protecting them from incidental damage at the job site. So whether you need to add a special touch to a new job or cover an existing eyesore, PVC column wraps from Fypon® are perfect for your next project.

**For installation instructions, please visit the Product Support section at [www.fypon.com](http://www.fypon.com).**

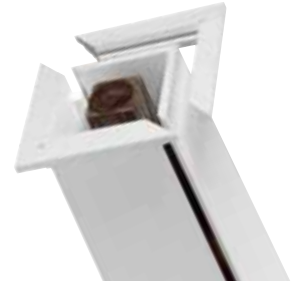

**FYPON®**

## How to Order

### PVC Column Wraps

Fypon® PVC Column Wraps are non-structural and simply wrap an existing 4" x 4" treated wood post or other structural support. Column Wraps come in a complete kit, which includes two shaft halves, cap, base, installation cleats, installation instructions and a tube of adhesive caulk. Choose between various tapered and non-tapered styles with a height that meets or exceeds your height requirement.

**Note:** If you have NOT met the structural requirements for your project, Fypon offers urethane columns that are reinforced with steel and have load-bearing capacities up to 12,000 lbs. Please refer to the Balustrade and Columns section of this catalog for structural products.

### Fabricated Products

Some products in this section have fabricated options, which are indicated with a **Fabrication Code** icon. This means that the standard part can be altered for additional sizes or accessories. Fabricated products created by altering stock products ship from our facility within ten days.

Some of the fabrication options are shown to the right, but not all options are available for every style of product. For a complete listing of fabrication options for each product, visit the Product Support section at [www.fypon.com](http://www.fypon.com).

The Fabrication Code shown in the product chart will appear as the product number on all paperwork you receive from us, followed by an Options section which lists your specific selections. The unique combination of your selections is represented by the ID Number.

To reorder a fabricated part, you will either need to submit the information from the Options section of your order or provide the Fabrication Code and ID Number.

### Custom Products

If a truly unique design is required, Fypon can create it for you. Please fill out our Custom Quote Request form, which can be obtained by visiting the Products section of our website or by contacting Customer Service. Your request will then be quoted by our Custom Product Sales Department.

### Additional Column Wrap Products

Fypon offers a full line of PVC column wrap products, including additional shaft sizes and styles and optional cap and base styles. Please visit [www.fypon.com](http://www.fypon.com) for more information on these products.

### Fabricated Order Example

Select the stock product you want to alter and make sure it is a size large enough to cover your desired dimensions. Then provide the information outlined in the following example to the Customer Service Representative.

- A) Fabrication Code:** CKWTM
- B) Wrap Type:**
  - a. Tapered: \_\_\_\_\_
  - b. Non-Tapered: \_\_\_\_\_
- C) Wrap Style:**
  - a. Plain: \_\_\_\_\_
  - b. Recessed: \_\_\_\_\_
- D) Width (inches):** 12"
- E) Height (inches):** 55"
- F) Neck Mould:** yes or no
- G) Other:** \_\_\_\_\_

CWKT86044	16"	11"	9 1/2"	66"
CWKT86045	16"	11"	9 1/2"	72"

## Flexible Positioning

### PVC Column Wraps

Fypon column wraps feature a unique design which allows for flexibility in positioning the column wrap. The design has installation cleats on the exterior of the shaft, providing ample room around the support post.

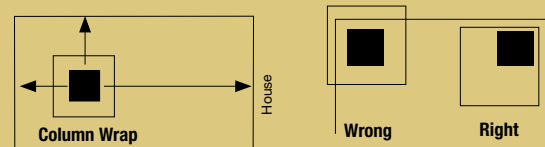

This allows for positioning adjustments to align several columns in a row or to allow for positioning close to the porch edge.

### Flexible Positioning around support post.

Also, because the Column Wrap does not come in contact with the structural post, the integrity of the wrap is not dependent on the support. If the structural post starts to twist or warp, the column wrap will not be affected.

Before ordering, measure to make sure there is enough clear distance from the support post to the edge of the porch. The needed space is dependent on the style of column. You will need more space for tapered columns than non-tapered due to the larger base.

**Allow Adequate Distance** when choosing the wrap width.
